New Fire Safety Measures

Walter E. Dragon

Once the special material has been magically charged by sunlight or lightbulbs on the ceiling or walls, it will hold onto this energy for hours! This is very important. If it was night-time and the lights in the halls did not work, the special material will let you safely find your way out of the building, even without electricity!

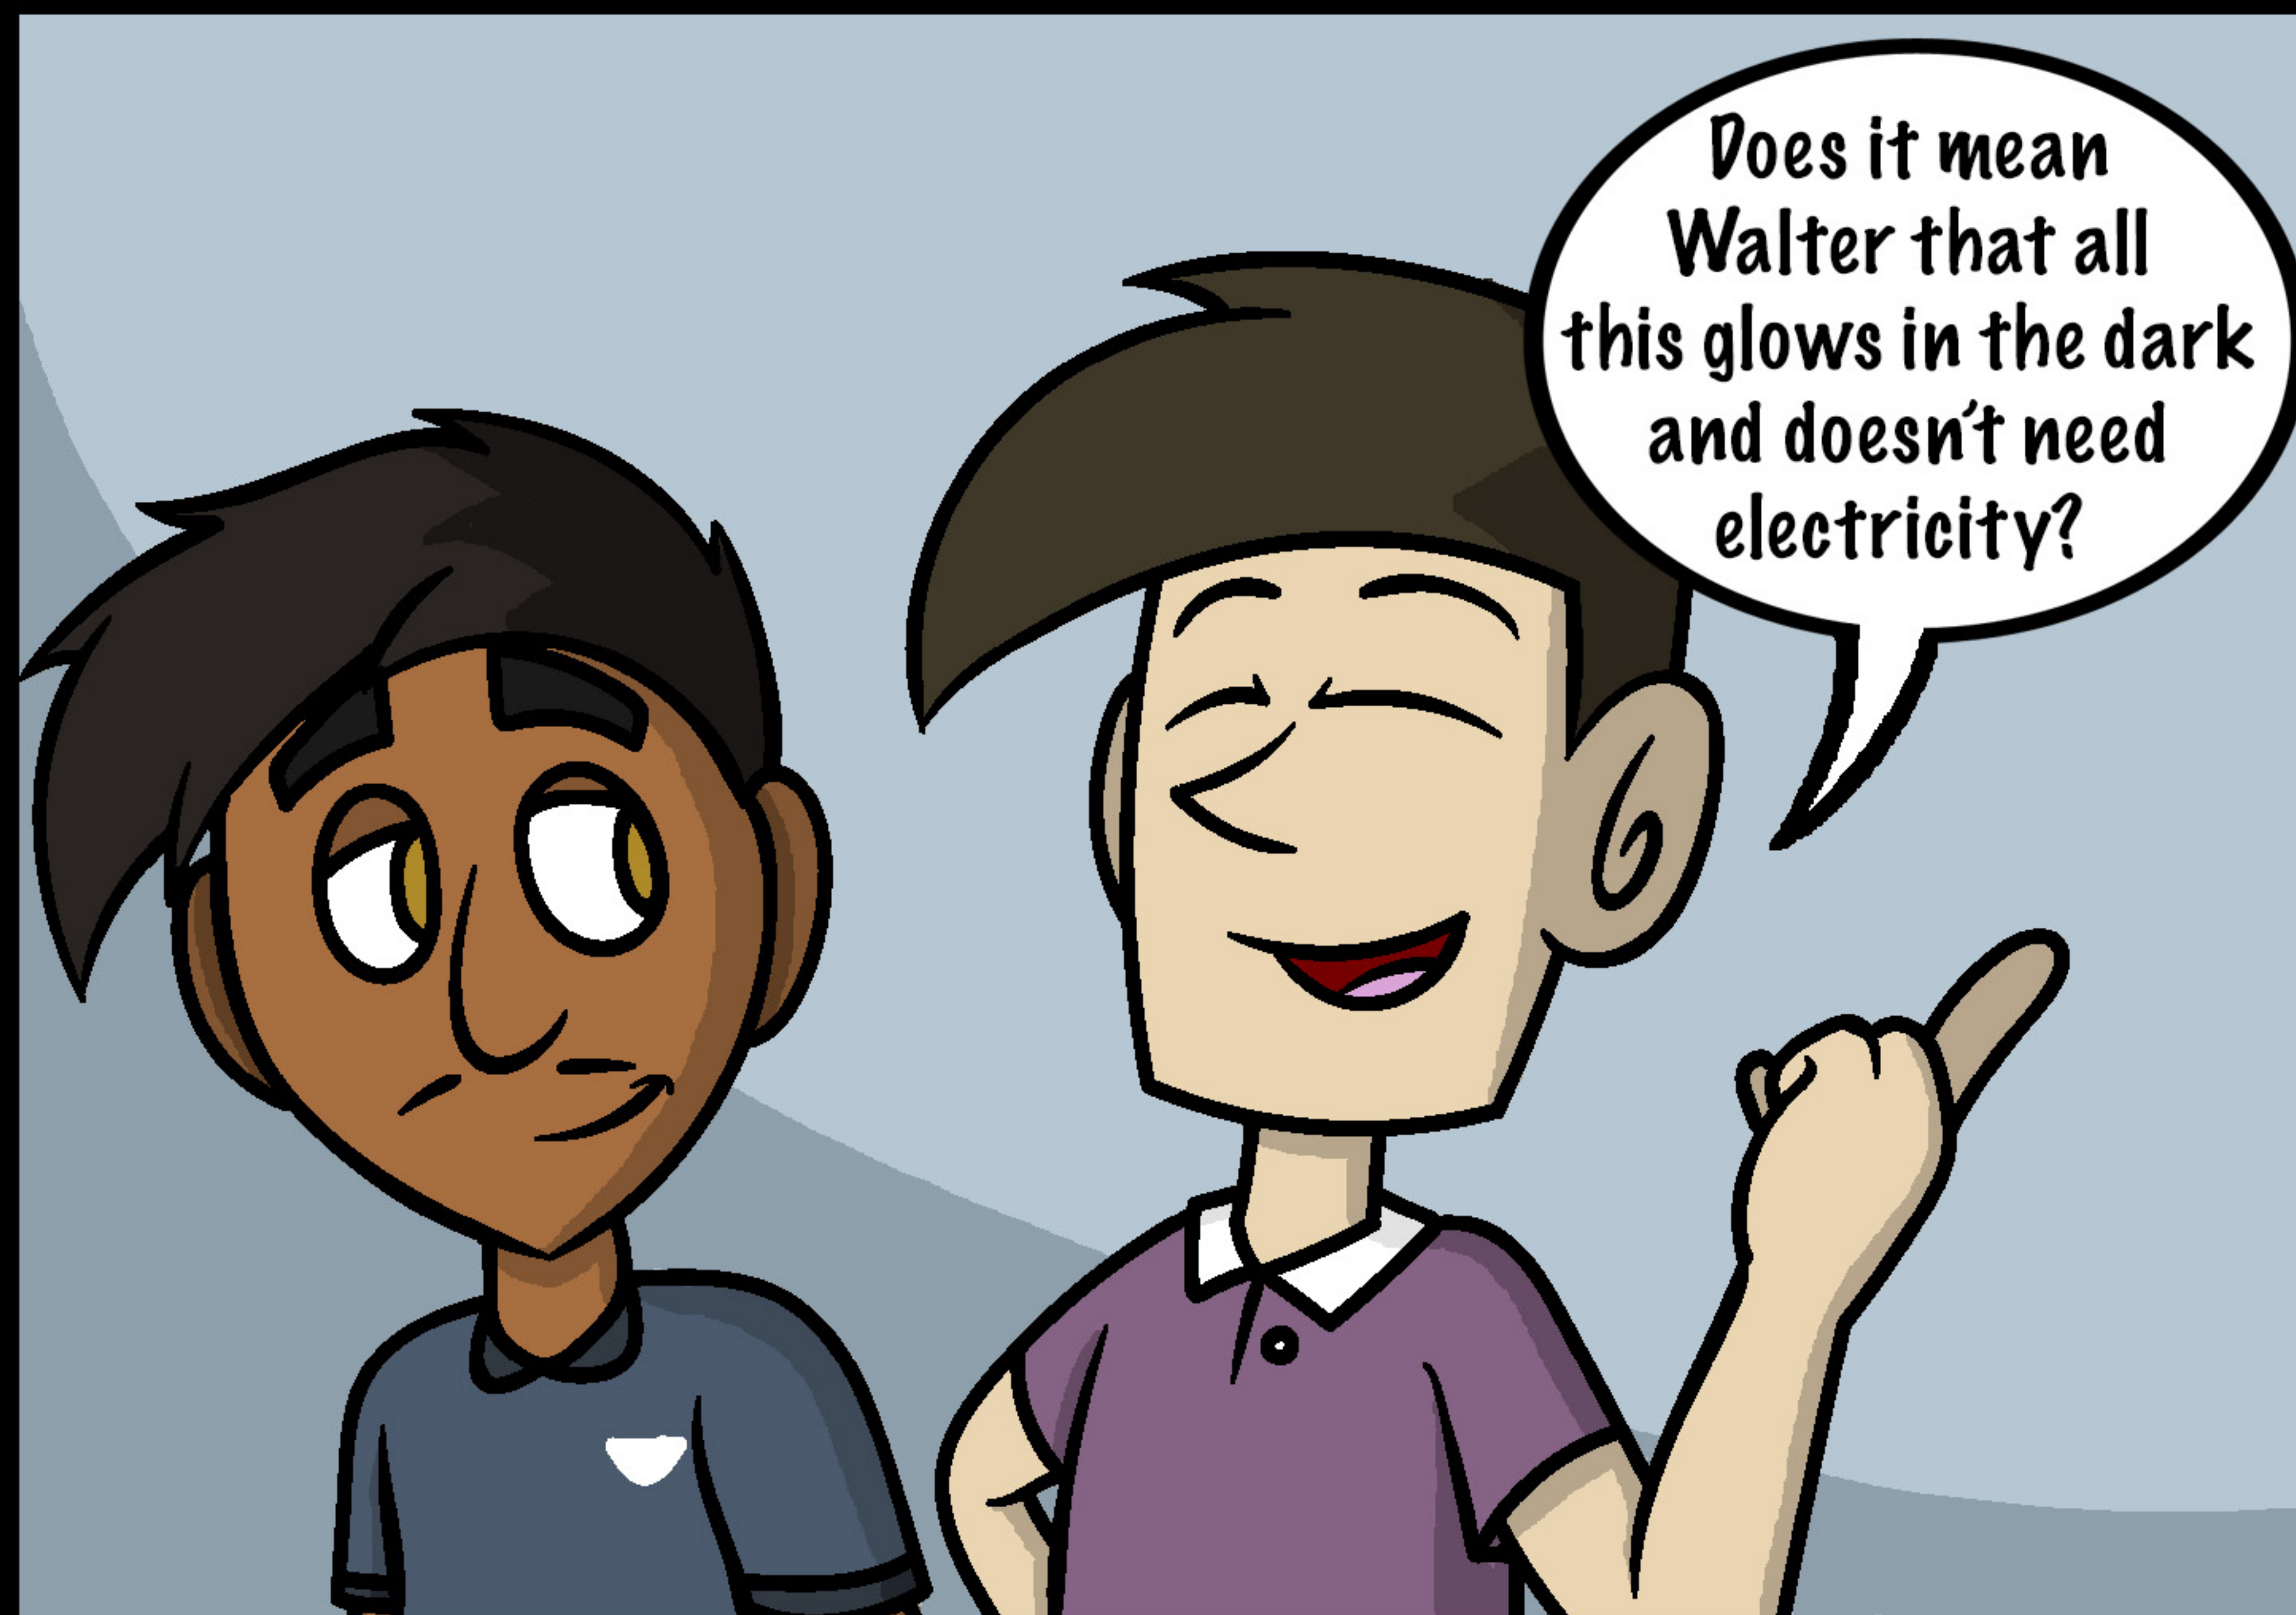

It is put onto the walls near the floor for a very good reason, too! If you ever need to quickly leave a building but the halls are all smoky and yucky, it is safest to stay close to the ground to avoid the smoke - you will still be able to see the special material when you are close to the ground which is exactly why we put it there!

We even put it on the stairs so that you can safely go down the stairs without falling in the dark!

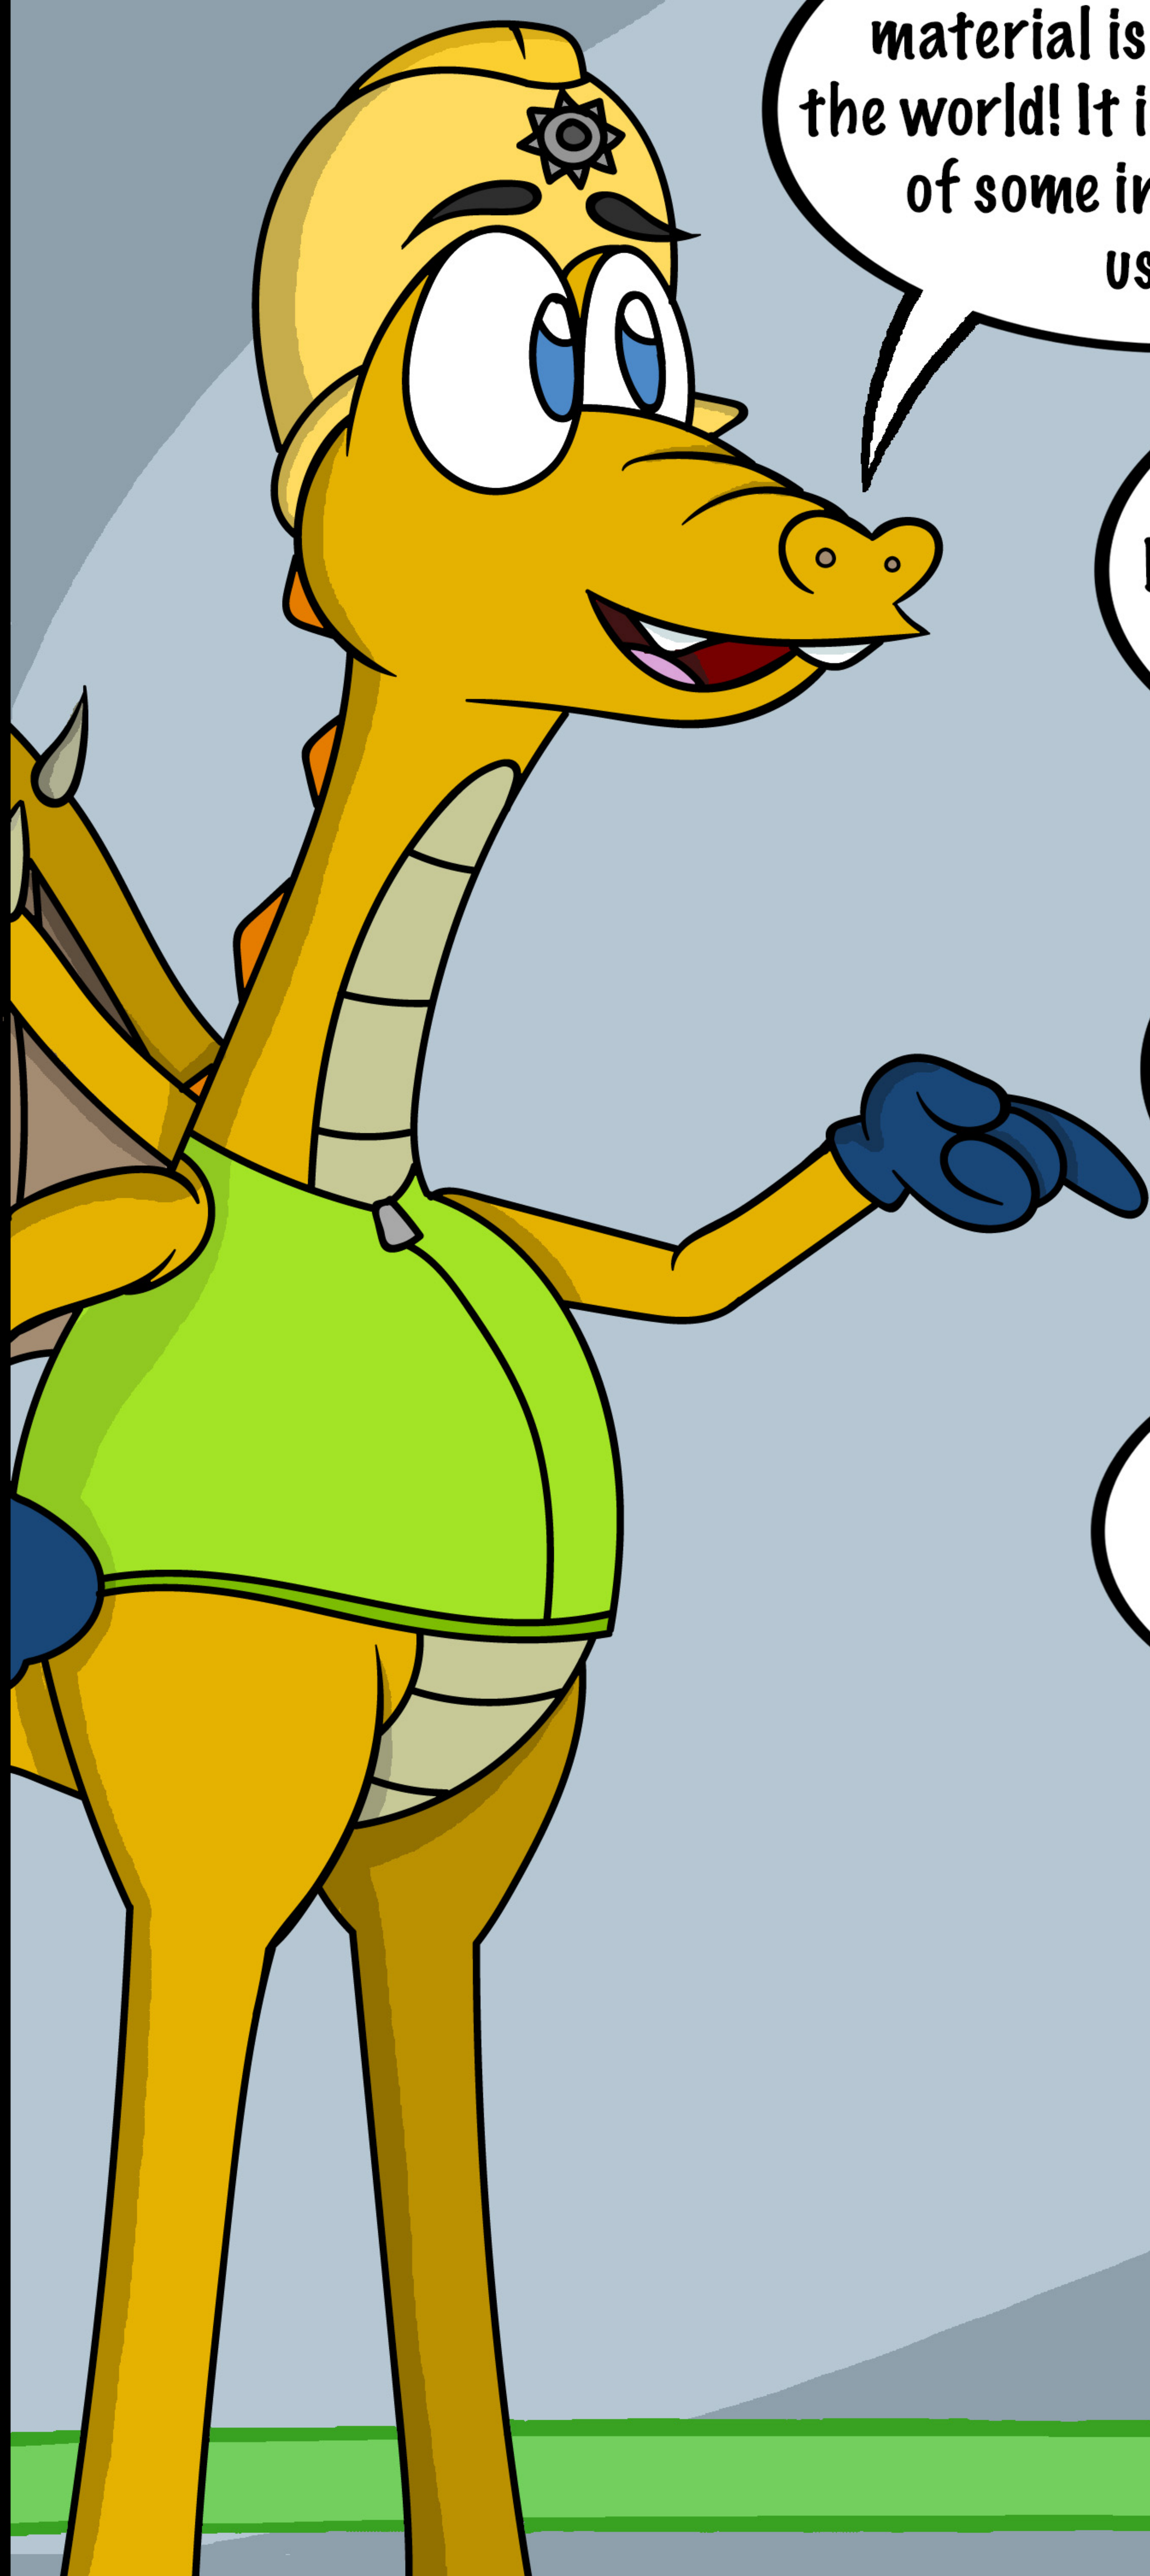

I really love these as they show me exactly where the stairs are!

Does it mean Walter that all this glows in the dark and doesn't need electricity?

Exactly!

The special material is used all over the world! It is a requirement of some industries to use it!

Some that come to mind are Military, Marine, Nuclear, Oil, Gas and Aviation! That's planes!

When we need to use the special material, we must make sure we use the right ones and that it is put in the right places.

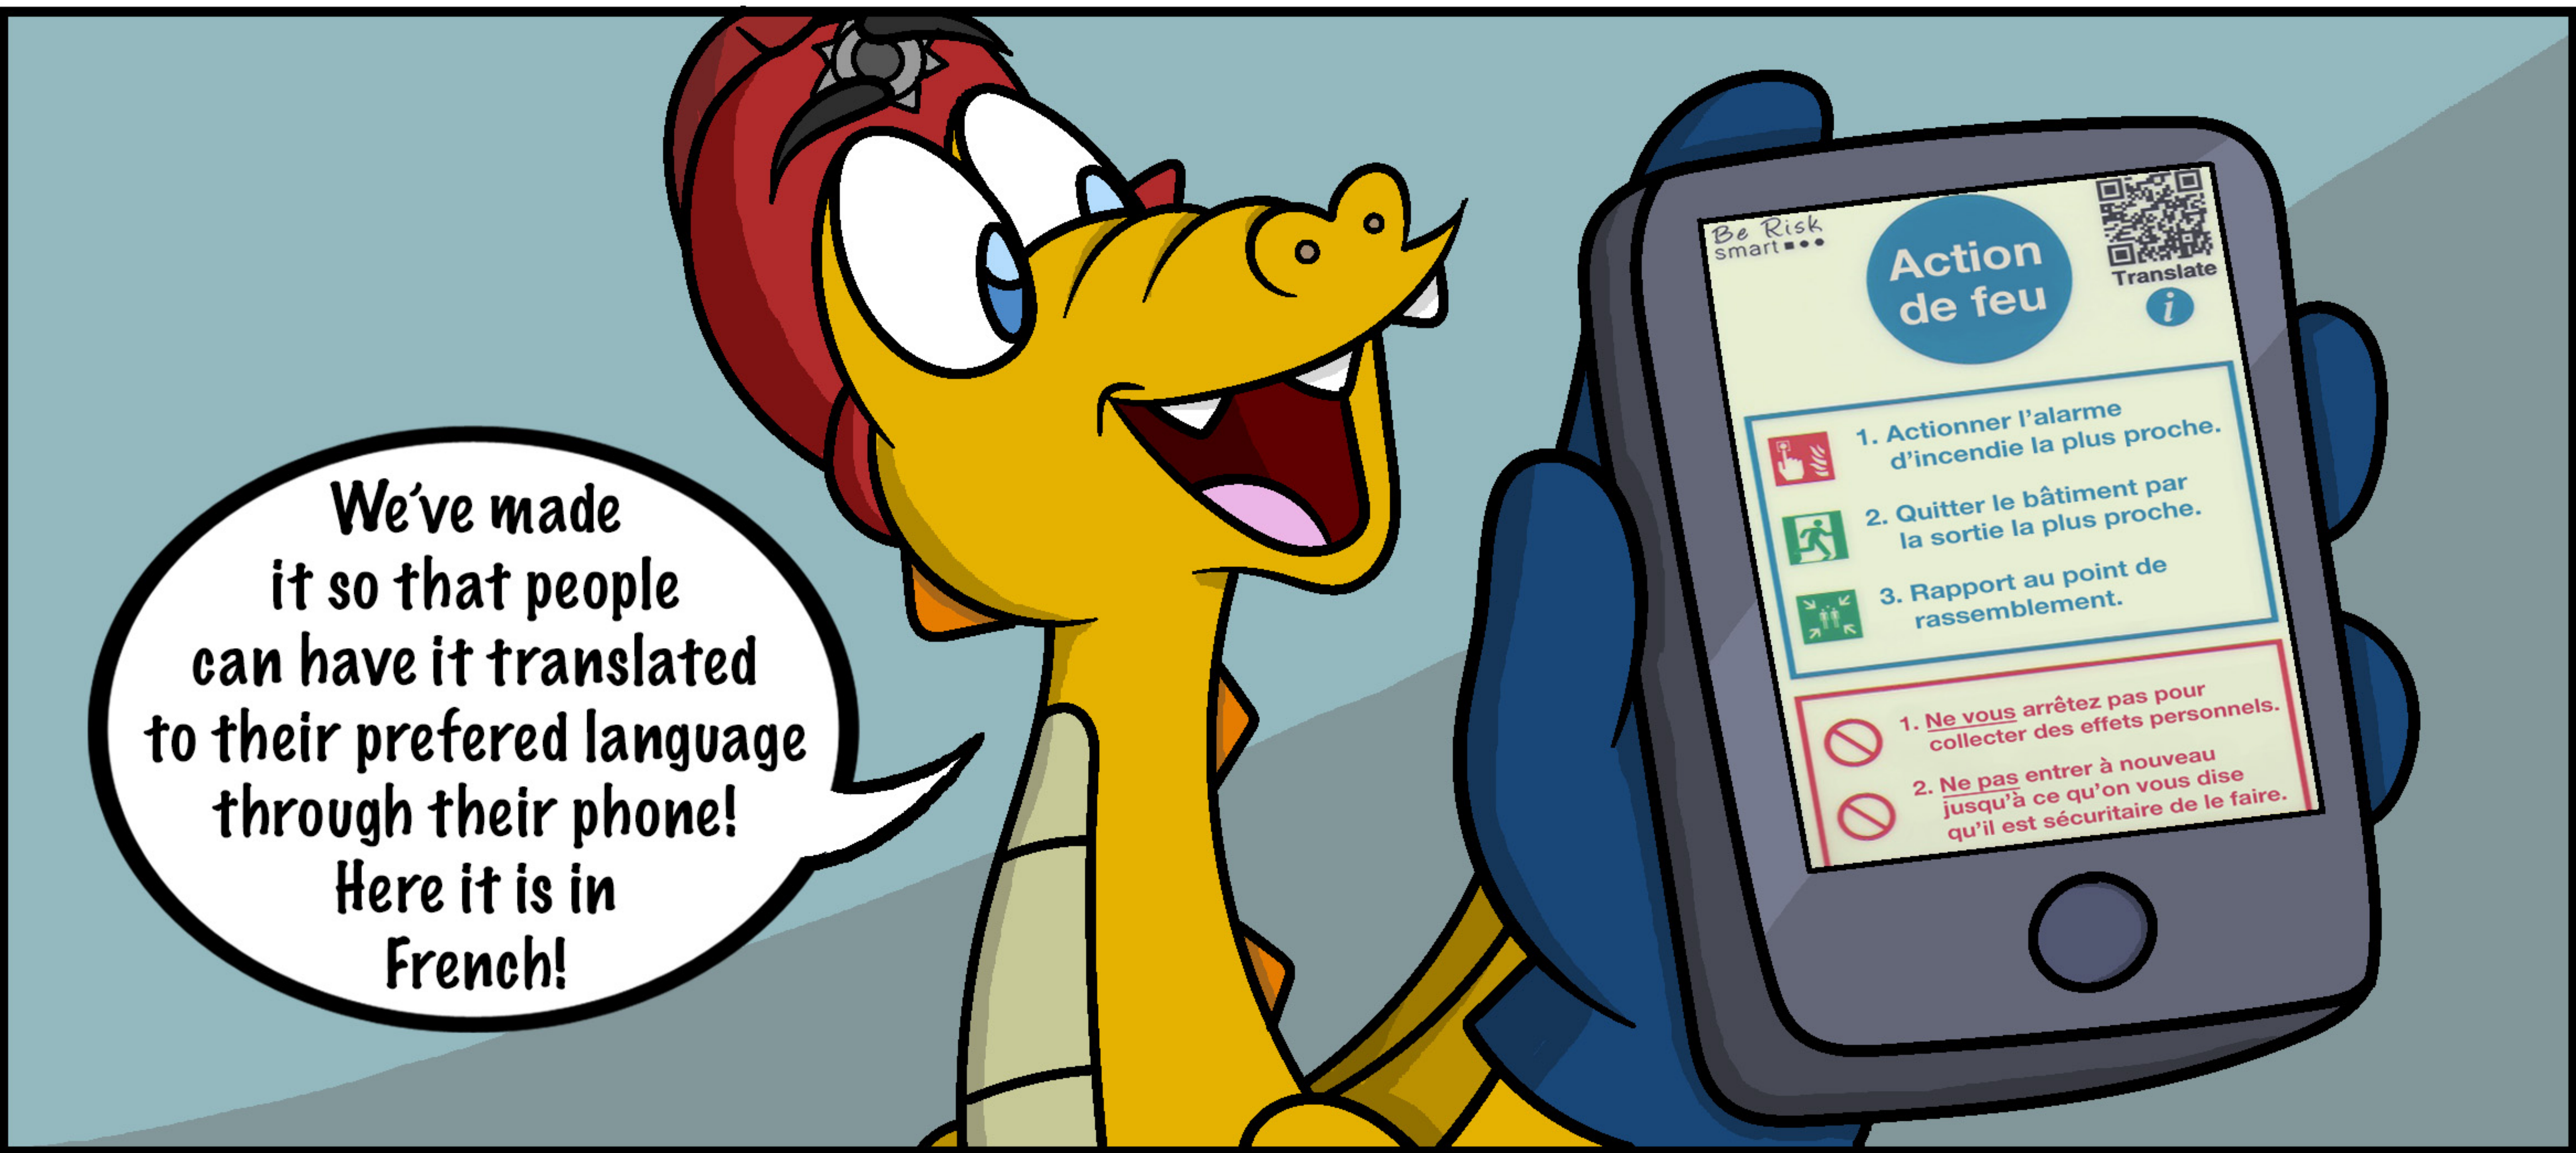

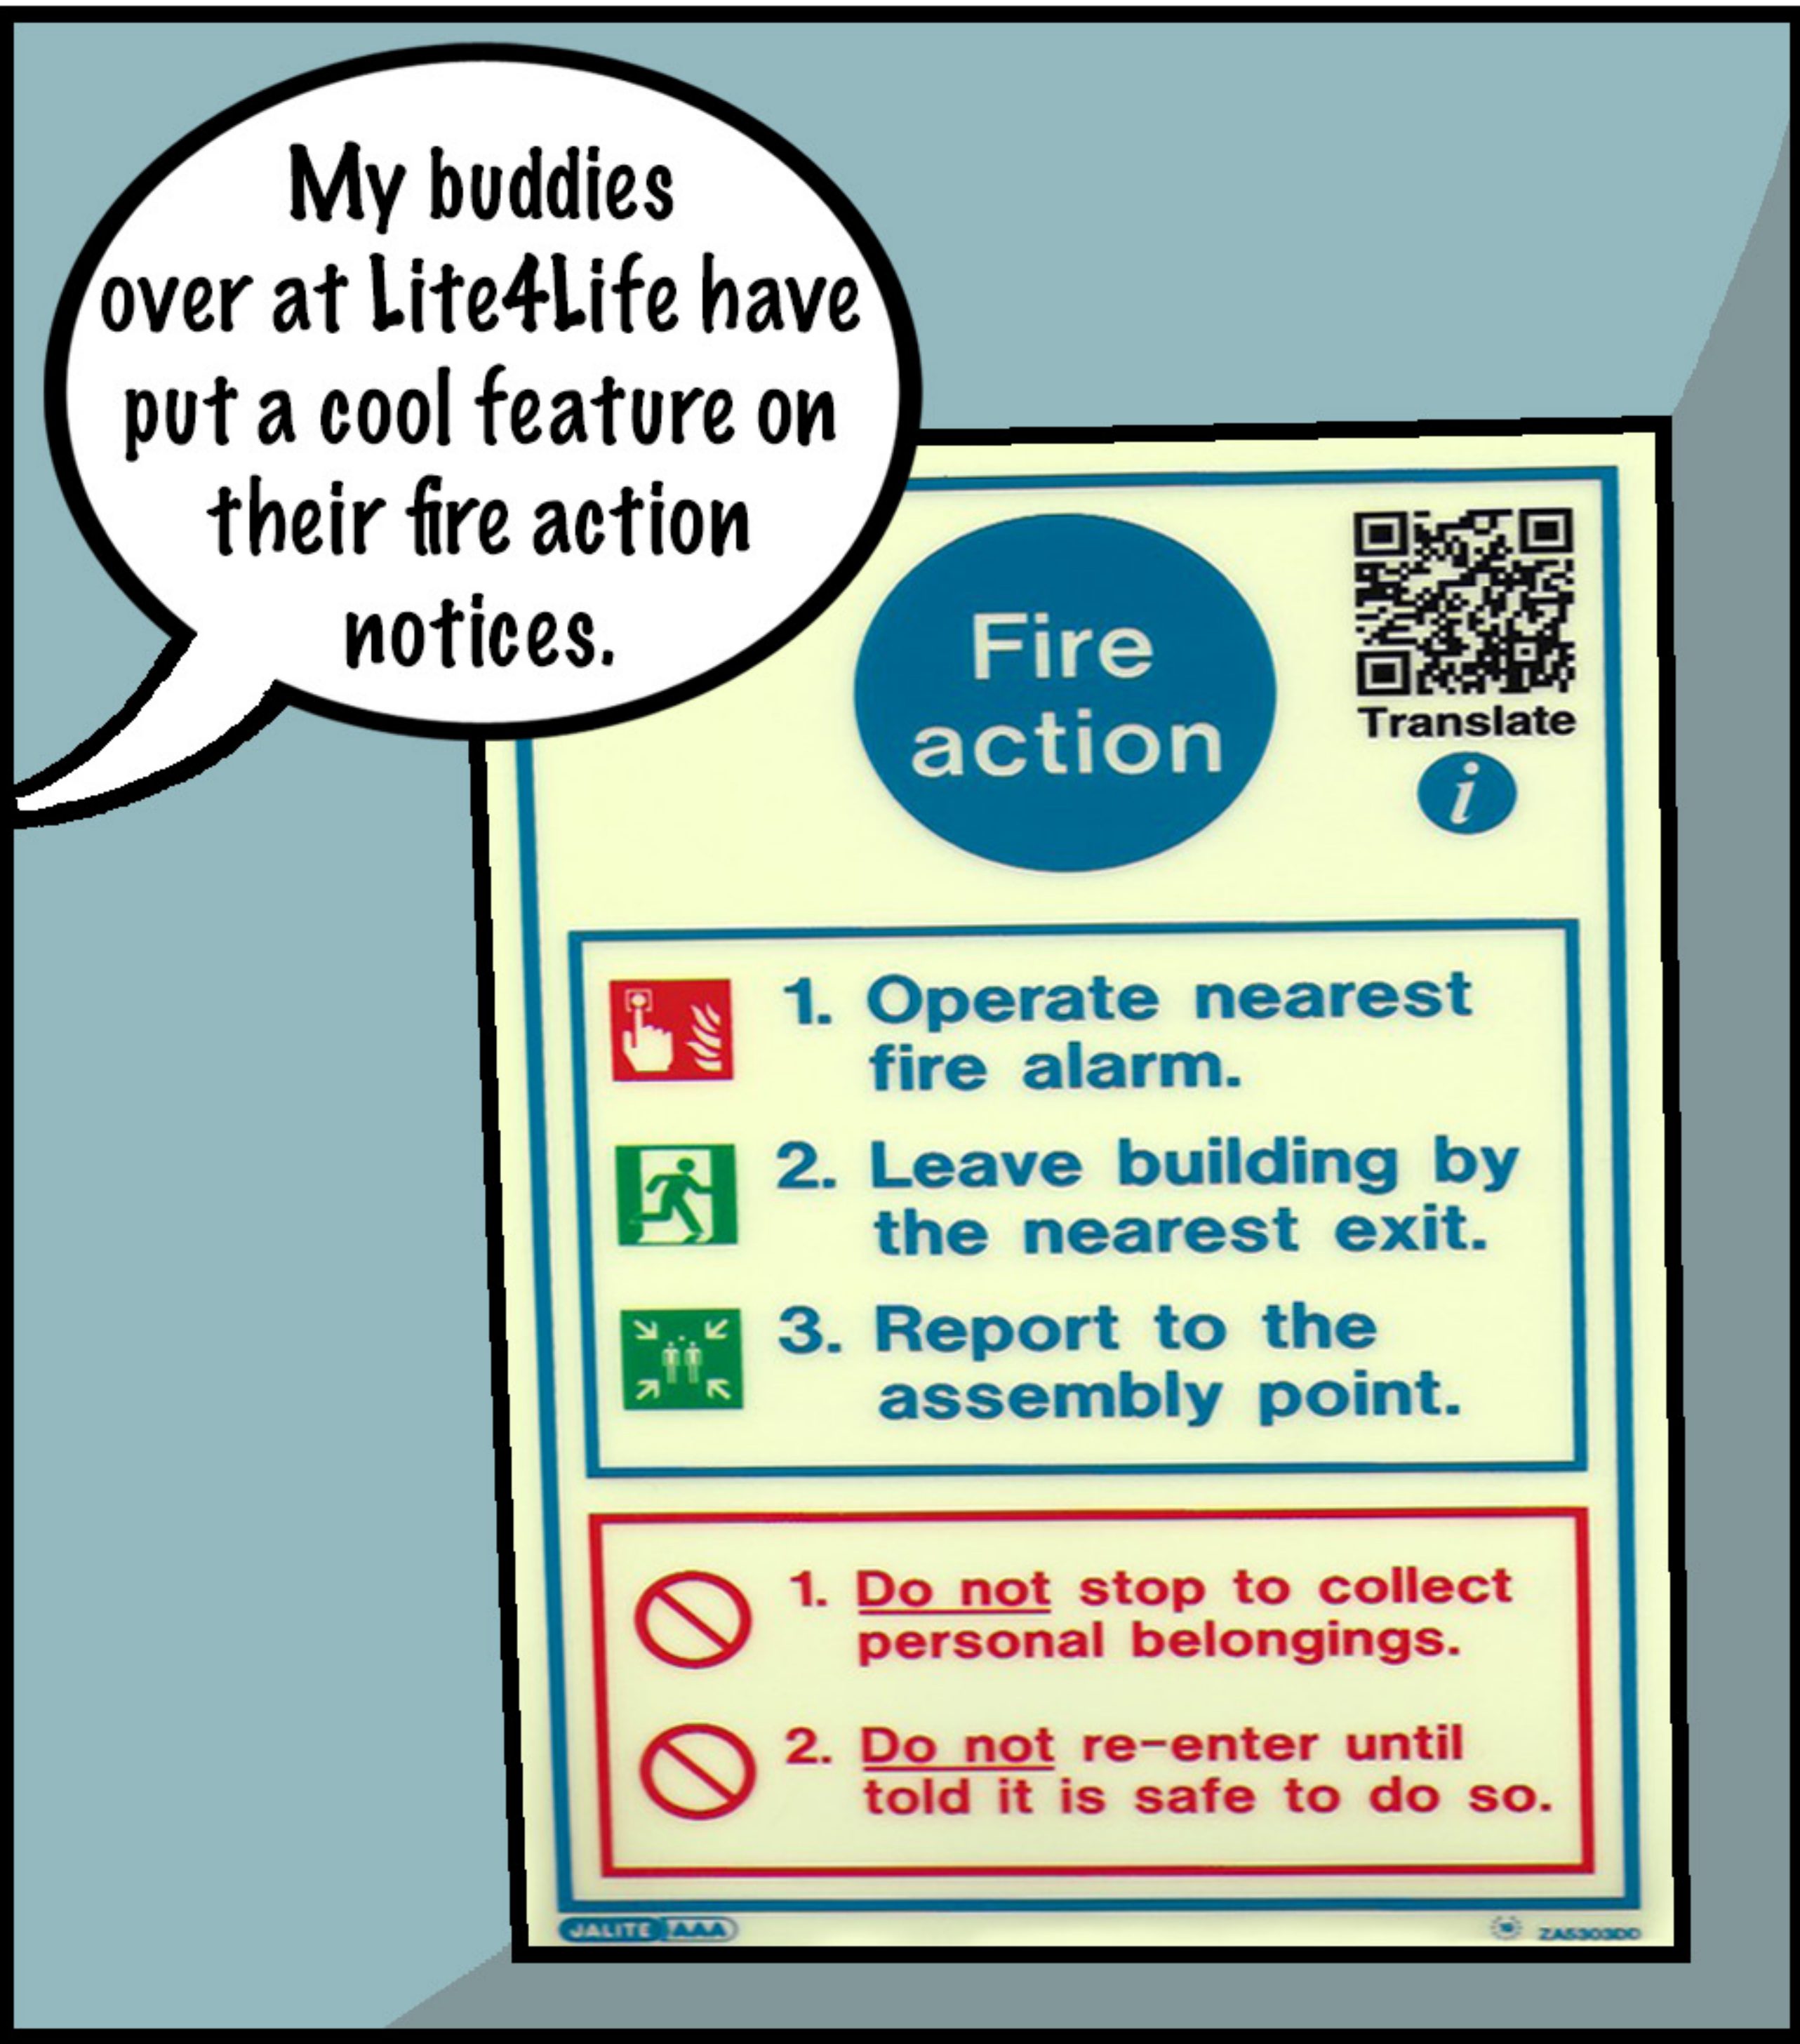

My friends at Lite4Life are experts and are always happy to help!

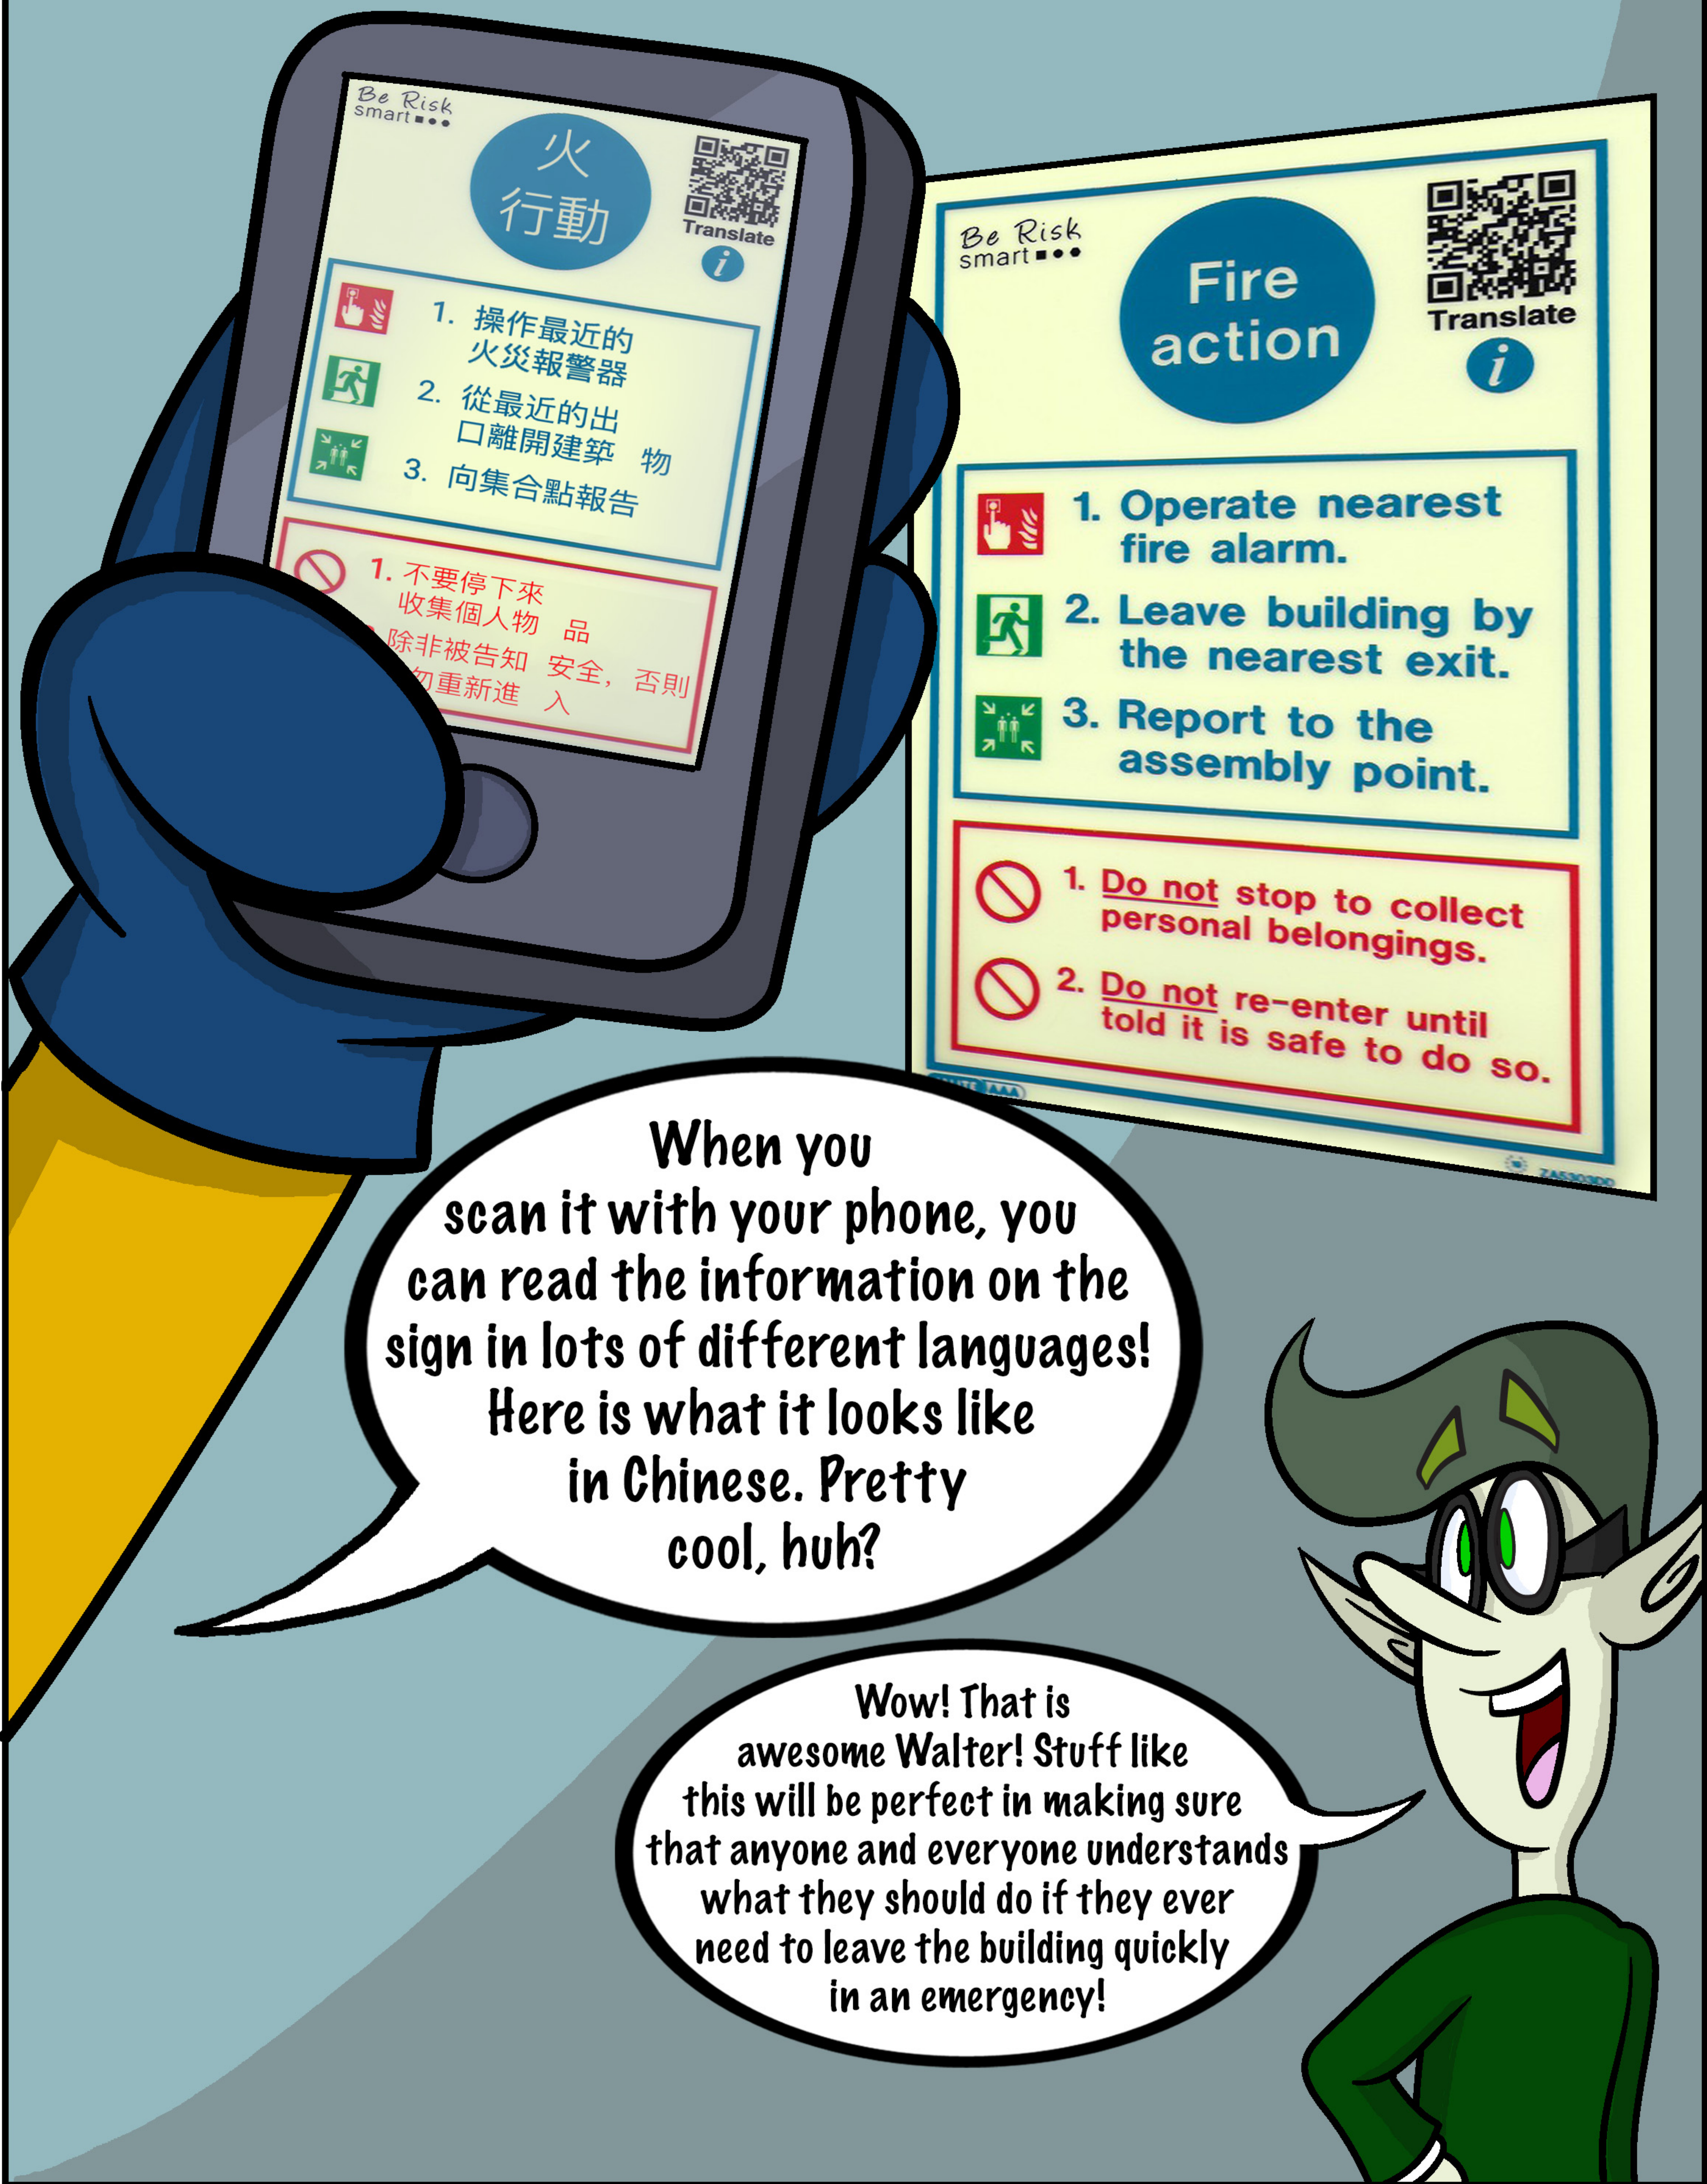

Now I have my fire-fighting hat on, the special material is especially important as it allows me and other fire-fighters to find our way around the building, fight the fire and help people who need saving! It is very difficult to see when the halls are all smoky. We also need to make sure that other signs glow in the dark, like fire action notices. These signs tell you what you should do if there was ever a fire in the building.

Be Risk smart

火行動

Translate

1. 操作最近的火災報警器
2. 從最近的出口離開建築物
3. 向集合點報告

1. 不要停下來收集個人物品
除非被告知安全，否則
勿重新進入

Be Risk smart

Fire action

Translate

1. Operate nearest fire alarm.
2. Leave building by the nearest exit.
3. Report to the assembly point.

1. Do not stop to collect personal belongings.

2. Do not re-enter until told it is safe to do so.

When you scan it with your phone, you can read the information on the sign in lots of different languages! Here is what it looks like in Chinese. Pretty cool, huh?

Wow! That is awesome Walter! Stuff like this will be perfect in making sure that anyone and everyone understands what they should do if they ever need to leave the building quickly in an emergency!

Thank
you so much
for your help
Walter!

Aw
shucks! Always
happy to help!
